

Semi-circular airing channels

The successor to the legendary Tolsma Techniek triangular system, an excellent way to air your agricultural produce

An invincible design, with wider corrugation and thicker gauge than other types on the market. By using this type of corrugated iron, a stronger product with a greater stability is the result. After extensive testing in our own research centre at Emmeloord (The Netherlands) of various prototype TT airing channels, those with side perforations proved to be by far the best. Closer comparison proved that round holes give less chance of a complete closure of the product. Practical tests performed with various relations both at home and abroad confirmed the results of our own industrial tests: the 'semi-circular Tolsma Techniek' is an airing channel beyond comparison.

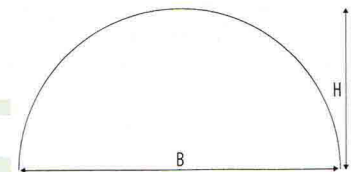

Always 'best mates'
with your storage unit

Type no.	Height* in mm approx	Breadth* in mm approx	Length in mm approx	Thickness in mm	Weight in kg approx	Surface flow in m ²
TT 1	400	800	870	1,25	12,5	0,25
TT 2	450	900	870	1,25	13,5	0,32
TT 3	500	1000	870	1,25	14,5	0,39
TT 4	550	1100	870	1,25	16,0	0,47

Application

Tolsma Techniek semi-circular airing channels are suited for airing agricultural produce: potatoes, onions, carrots and roots.

12 designs

A Tolsma Techniek TT airing channel can be built from twelve different options, by which channel lengths of more than 30 metres are possible. All varieties are made in our own works from galvanised sheet steel, which guarantees a long life.
