

Air-mix unit

Advanced ventilation system with cost-saving coupling to refrigeration system

- For box storage ventilation
- Mixes outside air with inside air
- Complete with climate control computer
- Coupling to refrigeration possible
- Easy to install

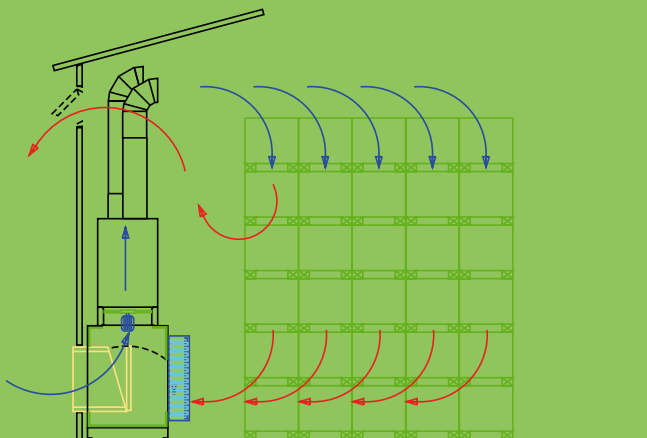

Tolsma
Storage Technology

Air-mix unit

The Air-mix unit is ideal for box storage ventilation. The inside air is mixed with outside air, so that the required temperature of ventilation air is always achieved. The Air-mix unit can be coupled to a refrigeration system. In that case, the air in the storage is drawn in by the cooling refrigeration unit's evaporator, which cools it. The cool air then returns to the storage.

- Can be installed quickly and flexibly
- Reliable and cost saving
- Hardly any maintenance required
